

In the Specification:

Please add an additional paragraph before the first paragraph on page 8, line 1 as follows:

AI The annotator 202 is a part of an annotation mechanism 203 which also includes a comparator 222, and an encoder 224, described below. The comparator of the annotation mechanism is coupled to state storage 240 to receive the gathered information from the collector and current state information. It sends comparator information to a differential generator 230. The encoder of the annotation mechanism is coupled to the differential generator 230 to receive differential information and to the state storage 240 to send current state information.

In the paragraph beginning on page 9, line 24, please make the following changes:

AI Alternatively, camera pose may be provided by a position tracking system based on gyroscopes, pendulums or magnetic field sensors (similar to those used in virtual reality helmets) installed in a video capture device 106 and provided to the collector 201[2d] by the video capture device 106. Instrumentation attached to a set of actuators 250 (attached to the video capture device 106) may be used to remotely control the pose of robotic cameras remotely.
